

Current posterior
 $p(\theta_{\text{EOS}} \mid \{d_1, \dots, d_n\})$

θ_{EOS}

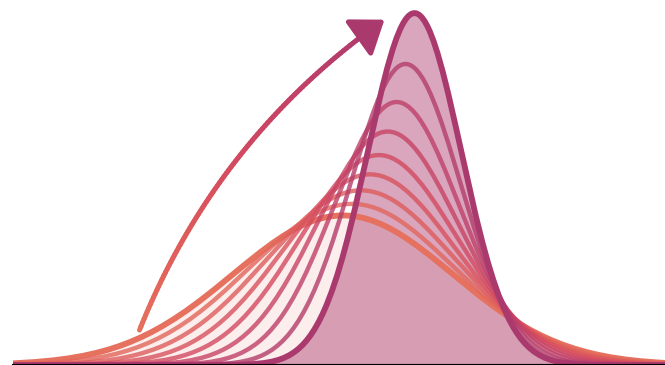

observe
→

Data tempering
Build queue of new events

Update posterior
Run likelihood tempering
to get $p(\theta_{\text{EOS}} \mid \{d_1, \dots, d_{n+q}\})$

$n \rightarrow n+q$

θ_{EOS}

$\text{ESS} < \alpha$
